The war with Sahra raged for years. The borderlords were the key to a successful defense of Iberia, and despite the war having been started for their benefit, the Life Mages among the borderlords consistently demanded concessions from the Queen in exchange for their support. It was widely known that the Duquesa de Aguilar (elder sister of King Consort Esteban, whom you displaced) was largely responsible for encouraging the borderlords' greed, and no one had any doubt her motives were as much personal as political.

The situation came to a head when the Duquesa made her future support conditional upon Agustina officially naming Princess Juanita to be heir to the realm and betrothing the Princess to the Duquesa's eldest child. What happened?

- Agustina gave in. She declared Princess Juanita heir and married her to the Duquesa's eldest.
- Agustina declared Juanita heir, but betrothed her to the eldest Sahran prince instead.
- Juanita died before she could be married to anyone or declared heir of anything. (Requires in-app purchase)
